Art Unit: 2856

## Election/R strictions

- 1. The inventions are distinct, each from the other because of the following reasons:
  - Claims 1-26, drawn to an apparatus for detecting the thickness of layers of ground water, classified in class 73, subclass 152.18.
  - II. Claim 27, drawn to an apparatus for detecting the thickness of layers of groundwater, classified in class 73, subclass 152.46.
  - III. Claim 28, drawn to a sensor for measuring thickness of liquids, classified in class 73, subclass 152.01.
  - IV. Claim 29, drawn to a sensor for measuring thickness of aqueous layers in a well, classified in class 73, subclass 152.02.

Inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all of the limitations in invention II are not found in invention I. The subcombination

Art Unit: 2856

has separate utility such as there is no mention of a data processor used in claim 27.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all of the limitations in invention III are not found in invention I. The subcombination has separate utility such as there is no mention of a strip as used in claim 28.

Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all of the limitations in invention IV are not found in invention I. The subcombination has separate utility such as there is no mention of array switches used in claim 29.

Art Unit: 2856

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all of the limitations in invention III are not found in invention II. The subcombination has separate utility such as there is no mention of a strip as used in claim 28.

Inventions II and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all of the limitations in invention IV are not found in invention II. The subcombination has separate utility such as there is no mention of array switches used in claim 29.

Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct

Art Unit: 2856

from each other if they are shown to be separately usable. In the instant

Page 5

case, invention IV has separate utility such as liquid level measurement.

See MPEP § 806.05(d).

2. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Andre' K. Jackson whose telephone number is

(703) 305-1522. The examiner can normally be reached on Mon.-Thurs. 7AM-

4PM.

If attempts to reach the examiner by telephone are unsuccessful, the

examiner's supervisor, Hezron Williams can be reached on (703) 305-4705.

The fax phone numbers for the organization where this application or proceeding

is assigned are (703) 308-7722 for regular communications and (703) 308-7722

for After Final communications.

Any inquiry of a general nature or relating to the status of this application

or proceeding should be directed to the receptionist whose telephone number is

(703) 308-1782.
